The program had three major goals: 1 to attempt to identify electroencephalography patterns unique to individual words, 2 ensure that those patterns are generalizable across users in order to prevent extensive device training, and 3 construct a fieldable pre-prototype that would decode the signal and transmit over a limited range. Several laboratories have managed to record signals from monkey and rat cerebral cortices to operate BCIs to produce movement. NewYork:AcademicPress, You can help by adding to it.
