Cognitive psychology has a narrow focus on mental processes. Clearly, the digital computer was a third force pushing and molding the development of cybernetics.

And that subfield would benefit greatly from greater interest by psychologists. After all, can we really say whether or not anyone other than ourselves is even conscious? Cybernetics and Human Knowing is a quarterly international multi- and interdisciplinary journal on second order cybernetics, autopoiesis and cybersemiotics. The theory also demonstrated how to combat the destructive effects of noise in the final understanding of both mechanical and biological agents as consisting essentially of information leads to the most important philosophical and theological implications of cybernetic theory.
